We spend one third of our lives in bed!

When we are spending one third of our lives in bed it is vital that we are getting the best night's sleep possible.

One of the main reasons mattresses cause back trouble is that they are not replaced regularly enough. Manufacturers and Chiropractors recommend changing a mattress approximately every 7 to 10 years, depending on how it is cared for.

'Some signs that the mattress may need replacing include annoying peaks, dips or lumps or waking up stiff and sore after sleeping on the mattress, said Sleepy's'

To assist consumers with selecting a bed that provides improved back support, the Chiropractors' Association of Australia designed tested and endorsed the Sleepmaker Chiropractic range.

Available exclusively from Sleepy's, the Sleepmaker 'Chiropractic range' offers a choice of support levels to meet individual body shape and size, as well as life stage and personal preferences.

Too Soft or Too Hard?

A bed that is too firm will elevate the hips and shoulders, causing the spine to sag in the lower back region. Similarly, a bed that is too soft will cause the spine to sag at the hips, both resulting in localised pressure on the spine that can lead to fragmented sleep and longer term health problems. Because every body is different, it's important to choose a bed with the right support and comfort for you.

The Chiropractors' Association of Australia recognises the importance of the relationship between the spine, the mattress and family health. This ensures parents and children wake refreshed and able to make the most of their day.

Sleepy's the mattress experts are helping the Chiropractors Association of Australia spread the word during this year's National Chiropractic Care Week, May 18th-24th.

The "experts choice" in mattresses!!
